

PACKAGES TO SUIT YOUR NEEDS

Experience the freedom of unlimited data or no speed limits

Standard Packages

have an unlimited data allowance but are subject each month to a sliding speed limit as per the Fair Use Policy - as you use more data your speed is gradually reduced in steps.

At any time you can purchase a Fair Use Policy "Reset" that returns your speed to the maximum possible.

Value Packages

have a monthly data allowance that can be topped up if needed as per the Fair Use Policy.

Unlike a Standard Package there is no sliding speed limit - for example, the maximum possible speed for Value 2M remains 2Mbit no matter how much data you use.

Add FreeZone (if available) for Unlimited Data

between 11pm and 5am every night. During these hours the sliding speed limit does not apply to Standard Packages and for Value Packages your allowance is unaffected. FreeZone is particularly useful for scheduling and making large downloads or uploads.

All Packages are subject

to the Fair Use Policy, and your maximum possible speed will be subject to network congestion (as with all internet services).

TELEVISION FROM THE SAME DISH

We are the only satellite broadband provider in the UK that allows you to combine broadband with Sky or Freesat from the same dish. All that's required is our dish (as it is slightly larger than the standard Sky/Freesat dish) and a special Quad LNB that gives you up to 4 digital feeds (available separately).

If You Have Sky or Freesat

and order the Quad LNB the installer can replace your existing dish.

If You Do Not Have Digital TV

then take this great opportunity to add it on the same dish. In addition to your choice of receiver we will supply the cable for an extra run of up to 30m.

Please note:

that if you need a cable run of greater than 30m, want to upgrade to Sky HD or want a custom multiroom installation with more than one receiver this falls outside of a Standard Install & your installer will discuss the additional costs with you.

TELEPHONE

You can use any VOIP provider (such as Skype) via BeyondDSL but as with any internet service it will affect your data allowance.

Our VOIP option sets up a separate, dedicated VOIP data channel that doesn't affect data allowance. You could talk 24/7 without any

effect on your internet connection! We have tested specific equipment and services with this data channel and only support their use.

More information is available on request or via our website.

THE EQUIPMENT

- 79cm Dish + Unique Fine-Adjust Az/EI Mount
- Interactive LNB - "iLNB" - to Send & Receive
- Unique "Point & Play" Audio Alignment Meter
- ASTRA2Connect Satmodem by Newtec
- 30m Twin Digital Coax Cable
- Ethernet Crossover Cable

FLEXIBLE INSTALLATION OPTIONS

Get a Pro

We can get an installer to contact you and arrange for a quote and installation date.

A standard install is no more than 30m cable from the dish to the satmodem, on a south-facing wall with no special access requirements - typically no higher than first storey.

If your install is non-standard or you are unsure please select a non-standard install on the Order Form. The cost will be quoted directly to you by the installer before work starts and you pay the installer directly for it.

Or DIY

If you are technically minded you can opt to install the equipment yourself. You can contact us for a CD with a "How to Install" video or view it online:

<http://www.beyondsl.net/technical/how-to-install>

There are a range of installation mounts available or you can provide your own 2-inch pole.

FAIR USE POLICY

As with all Internet Services, there are download and speed limits. This protects the user experience of most ordinary users from congestion caused by very heavy users dominating the bandwidth. The limits are more strictly applied during congestion & peak hours to share the overall bandwidth more fairly.

Peak Hours are usually 5pm - 10pm weekdays and 10am - 10pm weekends. Heavy internet congestion (e.g. due to large software updates) can also cause congestion and slower overall speeds.

All speeds in kbit/sec. 1Mbit = 1024kbit

The effect of data downloaded each month on maximum possible speeds

broadband anywhere in the UK

no phone line required

Speeds up to 4Mbps.
Prices from £18.99/month

As long as you have somewhere to install our dish with a clear view of the southern sky you can get our broadband service.

The dish connects to the supplied satmodem giving you broadband access via ASTRA, Europe's leading provider of satellite services - so not only can you experience the same reliability as Sky TV but you can also receive Sky or Freesat from the same dish.

Our service is compatible with any computer that has a network connection and by using a router you can even share the service with multiple computers.
