19 May 2010

for immediate release

Low-cost satellite broadband reaches your postcode. Now.

Communities all over the UK are finding this new way of connecting to broadband is right up their street. In fact, it's right up every street in the country no matter how rural or how far away from the telephone exchange.

With services starting at £18.99 per month and self-install satellite equipment only £299.99, there's no reason to wait any longer for expensive solutions from terrestrial providers. With just one phone call to the freephone information line 0800 368 1100, everyone can now order broadband to be delivered within 48 hours. Digital TV options can also be added for Sky or Freesat.

No need to pressurise big corporates, no need to get large public subsidies, no need to spend limited taxpayer funding, BeyonDSL means people, businesses and communities can get online with satellite broadband straight away.

Our customers say:

"Until I installed the A2C system from BeyonDSL I could not get Broadband Internet at all. We are too far from the exchange and no terrestrial broadband company could help... It was impossible but today it is possible." Leyburn, Yorkshire

"I took the matter up with our MP, who contacted BT, who said it was uneconomic for them to provide Broadband ...we installed A2C [from BeyonDSL]. It now works for Broadband." Wrexham, Wales

"Both my wife and I work from home and we needed a solution as our Professional work had become a nightmare without high speed broadband. Once we installed the Astra2Connect system all our Broadband problems were solved." Binfield, Berkshire

We say we've known for some time that satellite is the only economic way to reach millions of homes in the UK that will never get effective terrestrial broadband. Join our customers and you'll agree. Just call our FREE information line 0800 368 1100 and we'll get you online... fast.

About BeyonDSL

BeyonDSL is a specialist satellite ISP serving people beyond ADSL's reach all over the UK and Eire. It was launched in 2001 by a team of people involved in the first IP over DVB-S trials in Europe and the development of digital TV and interactive services over satellite. Based in north London with installers across the country, BeyonDSL has extensive experience in low-cost satellite broadband for consumers and SMEs and is proud to be ASTRA's partner in the UK for ASTRA2Connect. BeyonDSL is a subsidiary of Eurosat Distribution Ltd.
